

## We have a hearing loop!

Hearing loops bring clear sounds from a microphone directly into a person's ears. The amazing wireless sound is not degraded by distance, reverberation, or background noise.

To use the system, people:

- Without hearing aids or hearing aids without telecoils, please see ushers to borrow headphones and a receiver.
- With hearing aids or cochlear implants with telecoils, just switch to your telecoil setting and enjoy the service. No extra equipment needed to be checked out! Please consult your audiologist or hearing instrument specialist to ensure your telecoils are properly adjusted.

For more information about hearing loops, please visit [www.CenterForHearingAccess.org/](http://www.CenterForHearingAccess.org/)
